

BOMLink

Compatible Operating Systems: Windows XP
Product Languages: English

Compatible Autodesk Applications: AutoCAD, AutoCAD Electrical, AutoCAD Mechanical

Break down the brick wall between design and manufacturing! BOMLink is a business process solution that connects AutoCAD to your ERP or a central database. By linking BOMLink with the back office solution, organizations are able to break down the brick wall between design systems and procurement systems and create an accurate view of the BOM and part information without any redundancy or typing.

With BOMLink, all information is stored in one centralized database. BOMLink provides tools that dramatically improve communication and design efficiency, translating into substantial bottomline savings.

Direct linkage between CAD and inventory (without expensive PDM toolkits) is the critical element for ensuring continuous operational efficiency for the parts master record, CAD drawings, and the product bill of materials. BOMLink provides the ability to quickly automate redundant manual data entry processes and ensure that engineering and manufacturing are synchronized.

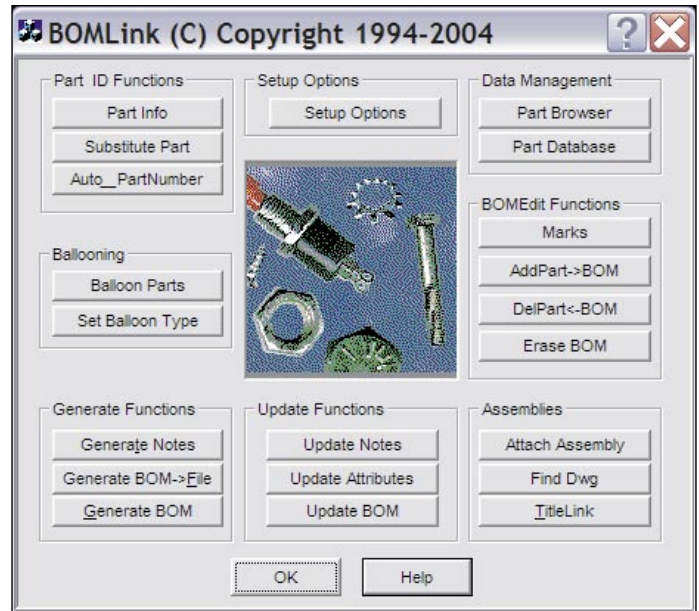

Do any of these sound familiar?

- Typing bill of materials (BOM) data over & over, shuffling paper outputs, flipping catalog pages for part specifications, counting like items, ballooning by hand, verifying results?
- Manually creating BOM tables, takeoffs and schedules?
- Managing unintelligent drawings/models from dtext, Excel, attribute extract, etc. every single time?
- Wishing you could link CAD to business systems or any database and output directly to ERP?
- Struggling to meet deadlines, avoid penalties, leverage resources on a job or a new productline?

Release CAD Drawings Fast, Eliminate Retyping, Increase Accuracy

BOMLink breaks through the information bottleneck! BOMLink will do away with retyping the same bill of materials data several times. Engineers will never again have to "eyeball" multiple drawings to ensure accuracy.

Ideal for any industry in manufacturing that uses parts, documents and bill of materials.

FEATURES & BENEFITS

- ◆ Eliminate double or triple entry of bill of materials, part data.
- ◆ Paperless manufacturing—Integrated CAD & ERP process
- ◆ Reduce manufacturing errors and cycle time
- ◆ Improve enterprise operational efficiency and communication
- ◆ Reuse and gain control over revisions
